Name: Jenson Wong
Student numbers: 1011015839

Q1
5: Course, Professor, Student, Teaches, Transcript.

Q2:
It's the DDL (Data Definition Language) script that defines the schema
Used in : src/main/resources/config/CMS.dbconfig through "dbDdl": "/config/cms-ddl.sql"
At compile time, it reads the DDL to generate the type-safe schema classes
At runtime, it runs the DDL to create the empty tables when the connection opens

Q3:
studentId references student(studentId)
courseId references course(courseId)

Q4:
1: :studentId

Q5:
in-memory DuckDB database

Assumptions

- New graduate course IDs are stored in lowercase (mie1501h, mie1520h, mie1517h) to match the existing format..
- ece1514h1f is marked as gradCourse = 1 because its 4-digit number makes it a graduate course.
- Query 2 returns distinct course names, because three thesis courses (mie496h1f/y1f/y1y) have same name.
- Queries 7 and 8 are written entirely in SQL
